

COMMERCIAL.

HONOLULU, AUGUST 22, 1917.

The Australian steamer City of Adelaide arrived on the 16th inst., 7 days and 22 hours from San Francisco, with mail, passengers and freight to W. L. Green, Bay, agent. The City of Adelaide took in some three hundred tons of coal and some little cargo, sailing on the 17th, having been in port only 26 hours.

The Hawaiian bark H. W. Wood arrived on the 17th, 14 days from Honolulu, with a full cargo, consisting of sugar, salmon, water, bread, and lumber, to H. Hackfeld & Co.

The bark Maud Helen arrived on the 17th, 22 days from San Francisco, in ballast, and sailed next day for Hawaii.

The three-masted schooner A. P. Jordan, Perry, master, arrived on the 16th, 15 days from Honolulu, Bay, California, with redwood lumber, etc., to Walker & Allen.

The ship Messenger, from Buenos Ayres, arrived on the 20th in ballast, being under charter to load guano at the American Company's Island. The Nebraskan from Tahiti, is in port and will take a return cargo of cattle, etc.

The Australian steamer Albion is now fully decked, even if she left on the 1st. On her arrival she will have immediate dispatch for San Francisco.

The Mores Taylor from San Francisco, and the Nebraskan from New Zealand, may be looked for on the 25th inst.

The D. C. Murray is loading for San Francisco and will sail during the week.

There are but few plantations grinding at this time, and little sugar coming forward.

The quantity to go forward for the next three months will be light.

Trade generally is dull and we need look for no improvement for the next six days. E. P. Adams holds a clearing sale today at the store of Messrs. H. Hackfeld & Co., the sale is well attended but prices generally are low.

Our market at this time is somewhat overstocked with flour, salmon, bread, etc., as well as other leading articles, and we see no prospect of reducing stock much for the next two months, as we have another vessel in on the way from Oregon with additional in the above.

EXPORTS.

For Sydney per City of Adelaide, August 17—	
Salmon, pigs	43
Value for Freight, \$225

Late Foreign News.

New York, Aug. 22.—The Government investigation into the explosion of the Westfield was resumed today.

Robinson, the colored engineer, testified that he had been an engine room hand for many years, but could not explain the difference between a low and high pressure boiler, except that one used steam at a low pressure and the other at high pressure. He defined a vacuum to be low air, but he knew that the atmosphere exerted a pressure, but did not know how much. He never read a scientific book, and could not read writing, but could read the numbers on the boiler. He was obliged to obtain assistance to ascertain the amount of steam the certificate of the boiler permitted.

Brainerd, the Superintendent of the ferry line, testified that he had the utmost confidence in the ability and ability of Robinson, whom he believed to be a competent man. He said that the boiler was not a vacuum boiler, but a low pressure boiler, and that the explosion was caused by the boiler being over-pressured. He said that the boiler was not a vacuum boiler, but a low pressure boiler, and that the explosion was caused by the boiler being over-pressured. He said that the boiler was not a vacuum boiler, but a low pressure boiler, and that the explosion was caused by the boiler being over-pressured.

New York, Aug. 22.—The official investigation of the cause of the explosion of the boiler of the Westfield was continued today. R. H. Thurston, Professor of Mechanics and Engineering, thought the explosion was the result of oxidation of the interior of the boiler.

Robert Cresson, the fireman, who escaped, testified that he tried the water coals and found the water all right. They then shut the furnace door, the fire being an ordinary one, when he noticed the steam bursting out, and ran for his life. The witness was cross-examined with the view of discovering whether any risk was kept on board for himself and crew. He said that they kept on board, but he did not know what the risk was.

Alexander sent a dispatch to the Emperor immediately after the surrender of Sedan, offering to intervene, on the basis of the integrity of French territory and also to the same effect, the Emperor of the Empress that he had earnestly recommended the King of Prussia to open negotiations for peace, and not insist on the cession of French territory, as the disintegration of France would be dangerous to the peace of Europe. This proposal of Russian intervention was, however, spoiled by the outbreak of the Revolution of September 4th, and the flight of the Empress, which took place a few hours after a dispatch had been received from the Emperor Alexander. On hearing the news that the Republic had been proclaimed, Alexander withdrew his offer of intervention, and notified the King of Prussia that Russia would remain neutral. Jules Favre and all the former members of the Government of September 4th, knew of the existence of the dispatch. It is said the letter was found after the flight of the Empress, among the secret papers of the Emperor, but was withheld from publication by the Government of the National Defense. These revelations are apparently made public with the consent of the Emperor. The Republic, which Jules Favre and all the former members of the Government of September 4th, knew of the existence of the dispatch. It is said the letter was found after the flight of the Empress, among the secret papers of the Emperor, but was withheld from publication by the Government of the National Defense. These revelations are apparently made public with the consent of the Emperor.

How WE HEAR AND SEE.—Humboldt, the best light author on the subject of acoustics, says that connected with the acoustic nerve are three thousand and six hundred and thirty-three thousand vibrations are recognized by the mind by its connection with the nerve and brain.

A similar mechanism probably exists in the eye. The retina of the eye, which is the extremity of the optic nerve, is covered with exceedingly minute bodies called "rods and cones." These, it is probable, have the function of vibrating under different influences. The red light is produced by vibrations of about four hundred and thirty quadrillions of waves per second. It may set in vibration "rods and cones" that are tuned to such a vibration, while those that are sympathetic to the seven hundred and thirty quadrillions of waves of violet light, will be in motion thereby.

UNTIL CHANGED, the Honolulu Skating Rink will be open to the public EVERY NIGHT except Sundays and Tuesdays, from seven until ten o'clock.

Special rates on reasonable terms made with Clubs of Ladies and Gentlemen, by the day, week or month, giving exclusive use of the rink, lights and skating, with the privilege of having friends.

PRACTICE RINK FOR LADIES AND MISSES ONLY. On Tuesday, Thursday and Saturday Afternoons, from 3 to 6 o'clock. Admission Free; use of Skates 25 cents per hour.

Strict order will be maintained and no effort or expense spared necessary to give satisfaction to our patrons.

THE LOWEST TYPE OF HUMANITY.—The following extract is from an article on "Barbarism and Civilization," in the Atlantic Monthly:

"On the island of Borneo there has been found a certain race of wild creatures, of which kindred varieties have been discovered in the Philippine Islands, in Terra del Fuego, and in South America. They walk usually almost erect on two legs, and in that attitude measure about four feet in height. They construct no habitation, form no families, scarcely associate together, sleep in caves, or trees, fed on snakes and other vermin, eat eggs or mice, and on each other. They cannot be tamed or forced to any labor, and are hunted and shot among the trees like the great gorilla, of which they are a stunted copy. When they are captured alive, one finds with surprise that their uncouth babbling sounds like articulate language. They turn up a human face to gaze at their captors, and females show instincts of modesty; in fact, these wretched beings are men."
